

INTERNATIONAL SEMINAR ON **Interaction soil-rail track for high speed railways** **Geotechnical aspects**

LNEC • LISBON • PORTUGAL • 23rd – 24th of September 2008
SPG – Portuguese Geotechnical Society

Table of Contents

Preface

1 HIGH-SPEED RAILWAY NETWORK DEVELOPMENT AND DEMANDS

Portuguese high-speed railway network development

Luis Marques

High speed railways: track system performance

William Powrie

2 INOVATION IN EMBANKMENT CONSTRUCTION

Solutions for embankment-bridge transition zones

Ivo Seara & A. Gomes Correia

Soil and rock mixtures: constructive techniques and quality control

Andrea Brito & Laura Caldeira

Artificial intelligence applied to compaction rules and management

Paulo Cortez, R. Marques & A. Gomes Correia

New control quality construction tools: performance related tests

A. Gomes Correia & J.P. Martins

Contributions for standardisation of plate loading test

J. Paulo Martins & A. Gomes Correia

Contributions for earthwork specifications

Laura Caldeira & A. Gomes Correia

3 ADVANCED LABORATORY, FIELD AND PHYSICAL TOOLS

Accelerated railtrack test facility at Cedex

J. Manzananas & V. Cuellar

Centrifuge dynamic related studies

Luc Thorel

Advanced triaxial technologies and modelling parameters

A. Gomes Correia, Nuno Araújo, Jean Marie Fleureau

Application of the SASW method for the determination of stiffness and damping parameters of soils

M. Schevenels, S.A. Badsar & G. Degrande

4 MODELLING OF RAILTRACK

Numerical modelling of high speed train induced vibrations

G. Degrande & G. Lombaert

Factors that influence track-soil critical velocities

J.N. Varandas

Coupling stiffness-damping in modelling high-speed train track-embankment

J. Cunha & A. Gomes Correia
